

Finally: CloneDVD is ready!

Now available at www.elby.ch

Cham, 2003-06-18 - Finally the CloneDVD sheep can make themselves comfortable and eat their "Extra-Crunchy" Popcorn - as from today on CloneDVD is available at www.elby.ch. Elaborate Bytes AG, the manufacturer of CloneCD and CloneDVD, promises movie copies in top quality while having a very simple user interface. Convince yourself: Download the 30 day trial version with full functionality at www.elby.ch. The Online-Key to unlock the trial version costs 39 €. The boxed version is planned for mid july and will be available at 46 €.

CloneDVD - Copies movies fast, simple and in top quality

CloneDVD extracts, transcodes and writes any original DVD title you like to a single recordable DVD. The user can decide right from the beginning, if he only wants to copy one DVD title (i.e. the main movie), several DVD titles or the whole DVD. An integrated Video Preview plays an overview of all selectable DVD titles. The original menu can be included. When CloneDVD is used for the first time, the user has to select his personal Audio preferences (i.e. spoken language, subtitles). CloneDVD memorizes these last settings that were made by the user and proposes it the next time the program starts. Somehow CloneDVD becomes acquainted to his user!

Now only the DVD writer has to be selected and the transcoding- and writing procedure starts. CloneDVD works with most hardware and software DVD Players and writes on DVD-R/RW and DVD+R/RW.

Amazing image quality in spite of compression

While programming CloneDVD, great store has been set on the compression („Extra Crunchy“: Extra compressed) of the movie data. In spite of the high compression the movie copies show an impressive image quality. A special transcoding technology compresses your choice of DVD titles with your selected audio and subtitle streams to one DVD recordable. Even a movie of extraordinary length and several soundtracks will be copied by CloneDVD without considerably quality loss.

Impressive program speed

Despite very good results, CloneDVD copies very fast. With a powerful computer even a two and a half hour movie can be transcoded in 30 minutes. Movies with normal length take about 20 minutes.

Simple user interface

CloneDVD is very easy to use. Our unique Film Strip will guide you step by step through all settings. There are no menus, all settings are obvious and cannot be overlooked. Thematically related icons make the Audio- and Subtitle selection easier. As described above, the personal preferences as i.e. the language selection, has to be set at the first program run. The program memorizes the last settings that were made by the user and proposes it for all the following movies. Therefore CloneDVD is very suitable for beginners!
